

China's economic stimulus - Hope on the horizon?

Grégoire Sharma, CFA Senior Portfolio & Research Analyst

Chart of the Week

Source: Momentum Global Investment Management, Bloomberg Finance L.P. Data to 30 September 2024.

What this chart shows

The chart above shows the recent performance of Chinese equities, proxied here by the country's blue-chip CSI 300 index of Shanghai and Shenzhen-listed companies, following the announcement of monetary stimulus from the Chinese authorities. Given the disappointing performance of the asset class over the last three years, the sudden surge in price returns stands in stark contrast (circled in red). On Monday 30th September alone, the index gained 8.5%, the best day for Chinese equities since the Global Financial Crisis.

The CSI 300 rose a cumulative 24% over five sessions since Tuesday 24 September, just before the stimulus measures were announced where the People's Bank of China (PBoC) revealed a raft of stimulus measures to support the country's economy. Namely, cutting the central bank's main policy rate by 0.2% and the reserve requirement ratio, the amount of reserves lenders must hold, by 0.5%, adding needed liquidity to the banking system.

Why this is important

With a lot of negative news priced into Chinese stocks, the range of stimulus measures spurred investors to pile into Chinese equities ahead of the Golden Week public holiday. But whilst these moves are certainly impressive, monetary stimulus alone will not address the structural issues affecting the economy, namely the deceleration of economic growth, caused by a prolonged slowdown in the property sector, the poor state of local government finances, high youth unemployment, and more importantly perhaps the demographic headache caused by a decades-long one-child policy. For now, the monetary policy announcement may have just been enough for the Chinese economy to reach the 5% growth target by the end of the year. More importantly, though, the pledges from Chinese authorities of widespread fiscal stimulus to further support growth should hopefully have a longer lasting impact. Equity investors certainly seem to think so.

Weekly Market Update

The week ending 4 October showed global economic conditions increasingly influenced by easing inflation and persistent growth concerns, prompting central banks to adopt more cautious or easing stances

US

US job growth accelerated in September as non-farm payrolls increased by 254,000, significantly more than expected, helping alleviate concerns about a potential slowdown.

UK

UK mortgage approvals jumped to a two-year high in August, as the housing market continued its recovery.

Europe

Eurozone inflation estimates fell to below 2% for the first time in over three years fuelling expectations that the European Central Bank could pause further rate cuts.

Asia/ROW

Chinese equities surged last week after stimulus announcements, it was Hang Seng's best week since 1998 and CSI 300's since 2008.
